Hi Gagan,

Thanks for the message!

If our application uses Marketstack OHLCV data internally to calculate technical indicators, statistical scores, trend/market-structure classifications, and AI-generated analytical text, and the underlying Marketstack raw data cannot be reconstructed from those outputs, may those derived outputs be displayed to end users under the Basic plan?

Correct - that would be perfectly fine!

Let me know if you have any questions or concerns.

Best,

Aleksa

Hi Aleksa,
Appreciate the reply.
To confirm the derived-data point for our specific case: we publish a percentage change since a signal date (e.g. "+4.2%") for around 200 named stocks, rounded to one decimal, alongside our own propriety scoring output. **We never show a dollar price.** Our data always comes after the market close and we never update any of the percentages during the market hours. All our data lags behind and we only update after the market close. I am assuming this would be acceptable under the terms mentioned. I want to ensure we are doing the right thing and our intent is purely educational. Please feel free to visit the website theslowswing.com

Thanks
Gagan

Hi Gagan,

Thanks for your interest.

Please note that we are unable to provide any display or redistribution licenses for Marketstack data. Our data are offered with a commercial license for internal company use only.

This applies to all raw data provided by marketstack. Sufficiently derived data, meaning the raw data cannot be reverse-engineered, would be fine.

Best,

Aleksa

Hello
Would really appreciate if someone can provide some guidance regarding my query. Thanks

Hello,I have started a new website, The Slow Swing (theslowswing.com), which publishes stock screening and analysis. I'm on the Basic plan under this email address and I'd like written confirmation of one specific permission.What I do: I will use your end-of-day data to generate proprietary stock setups, rankings and analysis. I intend to have two surfaces display prices:A public track-record page showing roughly 175 past setups, each with its price at signal date and its current price A subscriber-only board of current setups with the same two prices per name.All prices are end-of-day, at least one full trading day old — never intraday or real-time. Around 200 tickers, refreshed once nightly in a single batched /eod/latest call.What I do not do: I don't resell, redistribute or re-serve your API. Nobody can query your data through my site, export a dataset, or retrieve it in bulk. They see individual prices rendered inside my own pages and analysis.My question: Does the Basic plan's "Commercial Use" grant cover displaying EOD prices this way — both publicly and to subscribers? Or does display to third parties require a higher tier or a separate licence?If you can point me to the clause that covers this, that would be ideal.Thank you,GJ SinghTheslowswing LLC\n\n-----\nSubmitted from: marketstack.com/contact\n\n-----\nProduct: marketstack\n\n-----\nSubscription: Basic\n\n-----\nPremium Support: True
